

IP professionals and patent examiners from the world's patent offices and research organizations rely on STN® for access to the complete collection of authoritative chemistry content from CAS, the world's authority for chemical information.

The unique value of CAS content

CAS is the only organization in the world whose objective is to **find, collect and organize all publicly disclosed chemical substance information** for chemistry and related sciences, including biomedical sciences, engineering, materials science, agricultural science and many other fields.

With CAS content, you leverage the power of hundreds of CAS editorial scientists working to enhance scientific literature and improve the discoverability, utility and integration of chemical information. This includes worldwide coverage of more than 10,000 active scientific journals and 63 patent authorities plus patent families, citations and more.

CAS editorial scientists:

- Highlight key scientific concepts and add detailed indexing terminology covering all areas of science
- Extract comprehensive information on newly disclosed substances, including structures for specific, generic and prophetic substances as well as trade names, synonyms, molecular formulas, properties and more
- Build connections between related documents, substances, reactions, citations and Markush representation to provide a comprehensive view of the research and IP landscape

CAS content is essential to drive better business decisions.

“CAS is seen by the pharmaceutical industry as being the gold standard for chemical information.”

— Peter Murray-Rust
Unilever Centre for Molecular Informatics
University of Cambridge

GAIN AN ADVANTAGE WITH THE
AUTHORITATIVE CAS CHEMISTRY
CONTENT ON STN®

The greatest depth and breadth of value-added chemistry information — CAS content on STN®

	Content
CAS REGISTRY™ Chemical Substances	<ul style="list-style-type: none">• Detailed information for more than 80M substances and 65M sequences, including chemical structure, synonyms, molecular formula, ring analysis data and property data• Authoritative source for CAS Registry Number® identifiers• Covers 1800's to present; updated daily
CAPLUS™ References	<ul style="list-style-type: none">• More than 38M citations from more than 10K scientific journals, 63 patent authorities, conference proceedings, dissertations and selected web collections• Detailed concept and substance indexing, patent family information, citations and more• Covers early 1800's to present; updated daily
CASREACT® Reactions	<ul style="list-style-type: none">• Information for more than 57M reactions including structure diagrams, CAS Registry Numbers, detailed reaction conditions and experimental procedures• Covers 1840 to present; updated daily
CHEMLIST® Regulated Chemicals	<ul style="list-style-type: none">• Chemical inventory and regulatory status details for more than 308K chemical substances regulated in key markets across the globe• Covers 1979 to present; updated daily
CHEMCATS® Chemical Suppliers	<ul style="list-style-type: none">• Catalog information for more than 21M unique compounds from 880 global suppliers of commercially available chemicals including quantity, price and supplier details• Current listing; weekly updates
CIN® Chemical Industry News	<ul style="list-style-type: none">• Chemical industry trade publications including 1.7M records with abstracts, bibliographic information, CAS Registry Numbers and chemical names• Covers 1974 to present; weekly updates
MARPAT® Markush	<ul style="list-style-type: none">• More than 1M structure-searchable Markush representations from more than 416K associated patent references• Covering 1961 to present; updated daily

Data reflects database content as of November 2013.

CAS databases are also available on SciFinder® and through the CAS search service, Science IP®.
