(1) Numeric search field that may be searched using numeric operators or ranges.

(2) Either STN or Derwent format may be used.

(3) Search with implied (S) proximity is available in this field.

(4) Fields that allow left truncation

Super Search Fields

Enter a super search code to execute a search in one or more fields that may contain the desired information. Super search fields facilitate cross-file and multi-file searching. EXPAND may not be used with super search fields. Use EXPAND with the individual field codes instead.

Search Field Name	Search Code	Fields Searched	Search Examples	Display Codes
Application Number Group	/APPS	/AP, /PRN	S US2001-809003/APPS	AI, PRAI

DISPLAY and PRINT Formats

Any combination of formats may be used to display or print answers. Multiple codes must be separated by spaces or commas, e.g., D L1 1-5 TI AU. The fields are displayed or printed in the order requested.

Hit-term highlighting is available for all fields. Highlighting must be ON during SEARCH to use the HIT, KWIC, and OCC formats.

Format	Content	Examples
AA	Amino Acid table	D AA
AI (AP) (1)	Application Information	D 21 2 AI
AN	Accession Number	D AN TI
APO (AIO)	Application Number, Original	D APO
CR	Cross Reference	D CR
DED	Data Entry Date	D DED
DUPD	Data Update Date	D DUPD
DT (TC)	Document Type	D DT
ED	Entry Date	D AN ED
FASTA	Sequence (FASTA format)	D FASTA
FEAT	Feature Table	D 1 5 10 FEAT
FS (2)	File Segment	D FS
IDENT (2,3)	Percent Identity	D IDENT
MTY	Molecule Type	DIS L5 1-10 MTY
ORGN	Organism Name	D ORGN
PA (CS)	Patent Assignee	D 1-25 PA
PI (PN) (1)	Patent Information	D 1-15 PA PI
PNO	Patent Number, Original	D PNO
PRAI	Priority Information	D PRAI
PRNO	Priority Number, Original	D PRNO
PSL	Patent Sequence Location	D PSL
SCORE (2,4)	Similarity Score	D TI SCORE
SEQ (5)	Sequence (one-letter codes)	D 1-3 TI SEQ
SEQ3 (5)	Sequence (three-letter codes)	D 1 5 10 TI SEQ3
SEQC	Sequence Count	D SEQC
SEQK	Sequence Key	D SEQK
SEQN	Sequence Identity Number	D SEQN
SQL	Sequence Length	D 1-20 SQL
TI	Title	D L7 1-25 TI
UP	Update Date	D AN TI UP

(1) By default, patent numbers, application and priority numbers are displayed in STN format. To display them in Derwent format, enter SET PATENT DERWENT at an arrow prompt. To reset display to STN format, enter SET PATENT STN.

(2) Custom display only.

(3) Use RUN BLAST first. See page 7, Similarity Search.

(4) Use RUN GETSIM or RUN BLAST first. See page 7, Similarity Search.

(5) Sequences in PATGENE are given according to WST.25 of the WIPO.

Predefined Display and Print Formats

Format	Content	Examples
ALIGN (1)	Alignment as text between query and retrieved sequence in a similarity search (RUN GETSIM, RUN BLAST, or RUN GETSEQ)	D ALIGN
ALIGNG (1)	Alignment as image between query and retrieved sequence in a similarity search (RUN GETSIM, RUN BLAST, or RUN GETSEQ)	D ALIGNG
ALL	AN, ED, UP, DED, DUPD, TI, PA, DT, PI, AI, PRAI, FS, CR, MTY, PSL, ORGN, SEQC, SEQN, SQL, SEQK, SEQ, AA or NA, FEAT	D ALL
APPS	AI, PRAI	D APPS
BIB	AN, ED, UP, DED, DUPD, TI, PA, DT, PI, AI, PRAI, FS, CR, MTY, PSL (BIB is the default)	D BIB
IBIB	BIB, indented with text labels	D IBIB ALIGN
FASTA	FASTA format	D FASTA
IALL	ALL, indented with text labels	D L2 1-5 IALL
SCAN	ED, UP, DED, DUPD, TI (random display without answer numbers)	D SCAN
SQIDE	AN, ED, UP, DED, DUPD, MTY, ORGN, SEQC, SEQN, SQL, SEQK, SEQ, AA or NA, FEAT	D SQIDE
SQ3IDE	AN, ED, UP, DED, DUPD, MTY, ORGN, SEQC, SEQN, SQL, SEQK, SEQ3, AA or NA, FEAT	D SQ3IDE
TRIAL (TRI,SAM, SAMPLE, FREE)	TI, MTY, SQL	D 1-20 TRI
HIT	Hit term(s) and field(s)	D HIT
KWIC	Up to 50 words before and after hit term(s) (Keyword-In-Context)	D KWIC
OCC	Number of occurrences of hit term(s) and field(s) in which they occur	

(1) Use RUN GETSIM, RUN BLAST or RUN GETSEQ first.

SELECT, ANALYZE, and SORT Fields

The SELECT command is used to create E-numbers containing terms taken from the specified field in an answer set.

The ANALYZE command is used to create an L-number containing terms taken from the specified field in an answer set.

The SORT command is used to rearrange the search results in either alphabetic or numeric order of the specified field(s).

Field Name	Field Code	ANALYZE/ SELECT (1)	SORT
Accession Number	AN	N	Y
Amino Acid	AA	Y	N
Amino Acid, Count	AA.CNT	Y	N
Amino Acid, Percentage	AA.PER	Y	N
Application Country	AC	Y	Y
Application Date	AD	Y	Y
Application Number	AP (AI)	Y	Y
Application Number, Original	APO (AIO)	Y	Y
Application Number and Related Application Number	APPS	Y	N
Application Year	AY	Y	Y
Cross Reference	CR	Y	Y
Data Entry Date	DED	Y	Y
Data Update Date	DUPD	Y	Y

PATGENE

Title	TI	Y (default)	Y
Update Date	UP	Y	Y

(1) HIT may be used to restrict terms extracted to terms that match the search expression used to create the answer set, e.g., SEL HIT PA.

(2) SELECT HIT and ANALYZE HIT are not valid with this field.

(3) Used with a L-number created with BLAST and GETSIM.

Sequence Similarity Searching (BLAST/GETSIM)

The GETSIM and BLAST® run packages are available to search the PATGENE database for protein and nucleotide sequence data by similarity (homology). BLAST is provided in PATGENE with the permission of the National Center for Biotechnology Information (NCBI) of the National Library of Medicine (NLM). GETSIM is using the FASTA algorithm.

Nucleotide and protein sequences can be subjected to a similarity search as a query entered directly on the command line using RUN GETSIM/BLAST or they may be uploaded via the “Structures” page. See details [here](#). The uploaded sequence can be displayed with D LQUE.

To initiate a BLAST or GETSIM search with the command RUN BLAST or RUN GETSIM the following search codes have to be specified:

- /SQP for searching peptide sequences
- /SQN for nucleotide sequences
- /TSQN for searching peptide sequences translated from PATGENE nucleotide sequences.

For the BLAST package four additional search codes are available:

- /SQM (megaBLAST) for searching highly similar nucleotide sequences
- /SQDM (discontiguous megaBLAST) for searching similar nucleotide sequences allowing more mismatches
- /TSQP for searching nucleotide sequences translated from PATGENE protein sequences
- /TSQNX for searching translated nucleotides form PATGENE protein sequences

It is recommended to use the search codes /SQM or /SQDM rather than /SQN when searching longer sequences as the response time is much faster. The commands /TSQN, /TSQP and /TSQNX are more time consuming compared to the other commands.

When using the /SQN, /SQM, /SQDM, or /TSQNX option, it is possible to specify whether single (SIN), complementary (COM), or BOTH strands should be searched. The options can be specified with the search code, e.g., /SQN -S COM. If no search option is given, BOTH (both) will be used by BLAST and GETSIM. Note that for the /TSQN option generally both strands will be searched.

GETSIM / BLAST: Types of Searches

Description	Search Code	Search Examples (1)
Peptide homology	/SQP	RUN BLAST L1 /SQP RUN GETSIM L1/SPQ
Nucleotide homology	/SQN	RUN BLAST L1 /SQN RUN GETSIM L1/SQN
Translated peptide homology	/SQM (2)	RUN BLAST L1 /SQM
	/SQDM (2)	RUN BLAST L1 /SQDM
Translated peptide homology from translated peptide	/TSQN	RUN BLAST L1 /TSQN RUN GETSIM L1 /TSQN
	/TSQNX (2)	RUN BLAST L1/TSQNX
Translated nucleotide homology	/TSQP (2)	RUN BLAST L1 /TSQP

(1) Where L1 is a sequence query generated using the “Structure” page. (2) BLAST only

The maximum number of hits is by default 15,000 records. The parameter “-maxseq” allows to increase the maximum number of hits to 100,000 records, for example =>RUN BLAST L1/SQN -F F -MAXSEQ 100000. However, no additional documents will be found above the minimum score of a search without this parameter.

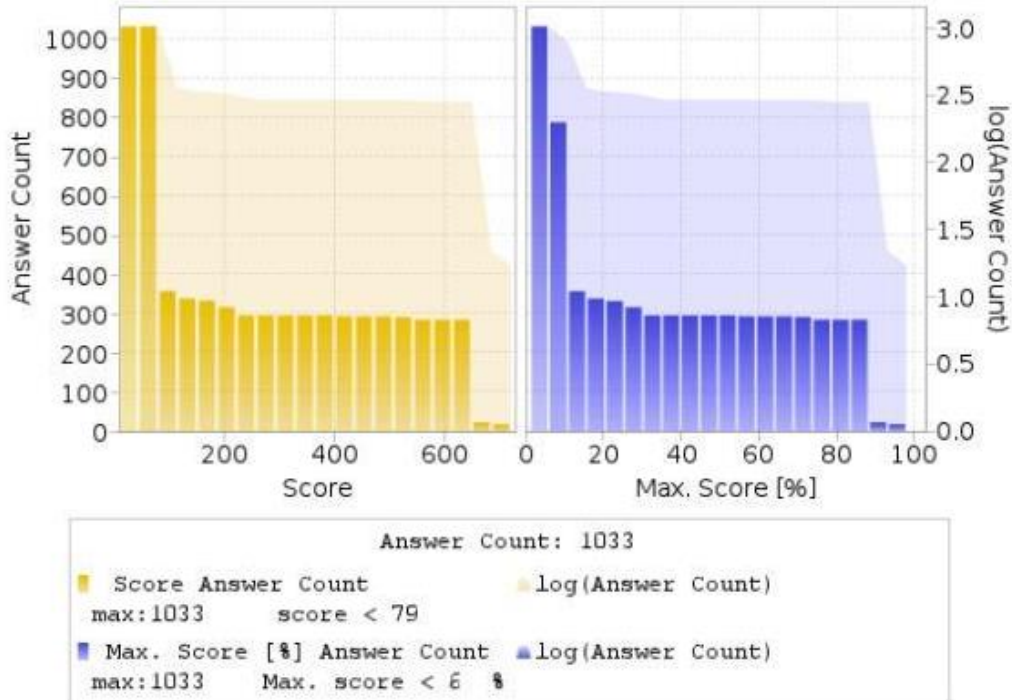

After a search with BLAST or GETSIM the number of retrieved sequences for the different score values are displayed in two diagrams. The y-axis of these diagrams represents the number of answers (absolute values are displayed as bars, logarithmic values are shaded) and the x-axis the score as the specific degree of similarity for this search. In the left diagram the score values are displayed, in the right diagram the percentage values of the maximum score.

PATGENE

In addition, two score values are given, the highest possible score value defining the maximum score when the query is aligned to itself, and the score of the best answer of the retrieved answer set. Both values are the same, if the query and at least one retrieved sequence are identical.

Highest possible score value: 736

Best answer score value: 721

Multiple answer sets (L-numbers) can be created with different cut off values for the score. Three options are available:

1) Select a part of the answer set using the score value from the left histogram. The generated L-number contains all records with a score above the selected value.

```
ENTER EITHER THE MINIMUM SCORE VALUE YOU WISH TO KEEP
OR ENTER MINIMUM PERCENT OF SCORE FOLLOWED BY %
OR ENTER "ALL" TO KEEP ALL ANSWERS
OR ENTER "END". "END" MUST BE ENTERED TO COMPLETE THE RUN COMMAND.
```

```
ENTER (ALL) OR ? :400
```

```
L3 RUN STATEMENT CREATED
```

```
L3 293 ACAAGATGCCATTGTCCCCGGCCTCTGCTGCTGCTCTCCGGGGCC
```

2) Select a part of the answer set using the percentage score value from the right histogram. The generated L-number contains all records with a percentage score above the selected value.

```
ENTER EITHER THE MINIMUM SCORE VALUE YOU WISH TO KEEP
OR ENTER MINIMUM PERCENT OF SCORE FOLLOWED BY %
OR ENTER "ALL" TO KEEP ALL ANSWERS
OR ENTER "END". "END" MUST BE ENTERED TO COMPLETE THE RUN COMMAND.
```

```
ENTER (ALL) OR ? :80%
```

```

L4 284 ACAAGATGCCATTGTCCCCGGCCTCTGCTGCTGCTCTCCGGGGCC
```

3) Keep the complete answer set with ALL.

ENTER EITHER THE MINIMUM SCORE VALUE YOU WISH TO KEEP
OR ENTER MINIMUM PERCENT OF SCORE FOLLOWED BY %
OR ENTER "ALL" TO KEEP ALL ANSWERS
OR ENTER "END". "END" MUST BE ENTERED TO COMPLETE THE RUN COMMAND.

ENTER (ALL) OR ? :ALL

```
L5  RUN STATEMENT CREATED
L5      1033 ACAAGATGCCATTGTCCCCGGCCTCCTGCTGCTGCTCTCCGGGGCC
```

In order to complete the RUN BLAST or the RUN GETSIM command, END must be entered.

ENTER EITHER THE MINIMUM SCORE VALUE YOU WISH TO KEEP
OR ENTER MINIMUM PERCENT OF SCORE FOLLOWED BY %
OR ENTER "ALL" TO KEEP ALL ANSWERS
OR ENTER "END". "END" MUST BE ENTERED TO COMPLETE THE RUN COMMAND.

ENTER (ALL) OR ? :END

=>

An L-number is generated for each selection, which contains all answers of the specified subset. Each L-number can be used for further processing. As the initial L-number is sorted by descending accession number, the selected L-number may be re-arranged by descending similarity score (SORT SCORE D L1) or descending percent identity (SORT IDENT D L1).

The alignment between the retrieved sequence and the query sequence can be displayed as text with the display format ALIGN or as an image with ALIGNG. The top line is the query sequence and the bottom line the hit sequence. Above each alignment the percentage of the BLAST and GETSIM score compared to the query self-score value and the percentage of identity is given. Both values can also be displayed as well with D SCORE and D IDENT. Both BLAST and GETSIM ALIGN format follows the standard convention for NCBI alignment displays.

Advanced User Options for BLAST and GETSIM

For the experienced user of BLAST® and GETSIM a variety of options are available via the STN command line. Altering these parameters will have a profound effect on the outcome of the search. FIZ Karlsruhe strongly recommends that users are completely familiar with NCBI documentation before embarking on customizing any of these settings. For further information see the [information on the NCBI website](#).

The advanced user options are specified with a single letter code preceded by a hyphen and followed by a blank and the required value, e.g. RUN BLAST L1/SQN -F F or RUN BLAST L1/SQP -E 0.1 -M PAM30.

Advanced User Options

Option	Switch	Values
1. Filter	-f	T (True), F (False), Default value is T. If T is set, for peptides the SEG, and for nucleotides the DUST filter is employed.
2. Expectation Value	-e	Floating point number. (Default is 10)
3. Word Size	-w	11 (default) or 7-23 for nucleotides 3 (default) or 2 for peptides
4. Strand for nucleotides only	-s	1 (SIN), 2 (COM) or 3 (BOTH) default value is 3
5. Matrix for peptides only	-m	BLAST: BLOSUM62 (default), BLOSUM80, BLOSUM45, PAM30, PAM70 GETSIM: BL50 (default), BL62, BL80, MD10, MD20, MD40, OPT5, P120, P250, VT160
6. Gap Penalty	-g	Peptides (default): BLAST 11; GETSIM 12 Nucleotides (default): BLAST 5; GETSIM 12
7. Gap Extension	-x	Peptides (default): BLAST 1; GETSIM 2 Nucleotides (default): BLAST 2; GETSIM 4
8. Penalty for nucleotide mismatch	-q	BLAST: -3 (default); GETIM: -2 (default)
9. Reward for nucleotide match	-r	BLAST: 1 (default); GETSIM: 3 (default)

BLAST Matrix settings (for option 5. Matrix)

Please note that for a certain matrix only a restricted set of possible gap and gap extension values are possible. The settings available to each matrix are summarised in the table below. Default settings are indicated in the table. Any different combinations will be rejected by the system and a warning message issued.

Searching Sequence Data with the GETSEQ RUN Package

The GETSEQ run package is a tool to search the PATGENE database for a direct sequence code match of peptide and nucleic acid sequences. This method is ideal for short and/or highly conserved sequence queries where similarity (homology) searching is not required.

Nucleotide and protein sequences can be subjected to a GETSEQ search as a query entered directly on the command line using RUN GETSEQ or the query may be created with the QUERY command, and subsequently searched through the GETSEQ run package specifying the query L-number (e.g., RUN GETSEQ L1, if L1 represents the sequence query).

```
=> RUN GETSEQ MCLHFLVLVICIL/SQSP
```

```
RUN GETSEQ AT 08:57:25 ON 2021-10-11
COPYRIGHT (C) 2021 FIZ KARLSRUHE on STN
```

```
GetSeq motif search by FIZ Karlsruhe; Version: 1.0.0
```

```
Query time:          115
L13  RUN STATEMENT CREATED
L13      8 MCLHFLVLVICIL/SQSP
```

Long sequences may be uploaded via the “Structures” page; see details here. The L-number may also derive from a previous sequence search in another STN database with bio sequence search capabilities, e.g., the CAS REGISTRYSM file.

Any L-numbered sequence answer set from RUN GETSEQ may be combined with any search field in the PATGENE file, for example => S L1 AND ARTIFICIAL SEQUENCE/ORGN where L1 represents the answer set from a RUN GETSEQ operation.

Hits of the retrieved sequence can be displayed in context of the whole sequences as text with the display format ALIGN or as an image with ALIGNG.

```
=> D ALIGN

Sequence Search Terms

Amino acid and nucleic acid sequences may be searched with one-letter code, amino acids also with the three-letter codes for common amino acids. Enter HELP AAC at an arrow prompt to display a table of the one- and three-letter codes for common amino acids and HELP NUC to display a table of the codes for nucleic acids.

Terms	Search Examples
One-letter codes for common amino acids Three-letter codes for common amino acids Enclose strings of codes in single quotes and use dashes to separate codes in strings. One-letter codes for nucleic acids	LAGLL/SQSP 'HIS-LEU-TYR-LEU-GLN-TYR-ILE-ARG-LYS-LEU'/SQSFP 'HIS-LEU-TYR-LEU-GLN-TYR-ILE-ARG-LYS-LEU' /SQEP ATGAAN/SQEN CATCTGTATT/SQSN

Types of Sequence Searches

In the GETSEQ run package four options are available for searching polypeptide sequences using amino acid codes and two options for searching nucleic acid sequences.

Sequence data for nucleic acid and protein sequences are displayed in the SEQ field with one-letter codes and the SEQ3 field with three-letter codes for proteins only.

Type	Definition	Search Code	Query Examples
Sequence Exact Protein	Search for sequences that match the query.	/SQEP	GAPGEK/SQEP 'ASP-HIS-ALA-ILE-HIS' /SQEP
Sequence Exact Family, Protein	Search for sequences that match the query and those in which family-equivalent substitution of the query amino acids occur.	/SQEFP	YGGFL/SQEFP 'TYR-GLY-GLY-PHE-LEU'/SQEFP
Subsequence, Protein	Search for exact answers plus sequences in which the query sequence is embedded.	/SQSP	LAGLL/SQSP 'ASP-HIS-ALA'/SQSP
Subsequence Family, Protein	Search for exact sequences, subsequences, and answers in which family-equivalent substitution of the query amino acids occurs.	/SQSFP	ATCXAWV/SQSFP 'THR-ASP-SER-GLU-SER-SER-HIS' /SQSFP
Sequence Exact, Nucleic Acid	Search for sequences that match the query. Ambiguity codes for nucleic acids are allowed.	/SQEN	ATGAAN/SQEN
Subsequence, Nucleic Acid	Search for exact answers, plus sequences in which the query sequence is embedded. Ambiguity codes for nucleic acids are allowed.	/SQSN	TGGAGAAGGC/SQSN

The families of amino acid equivalents retrieved in the polypeptide family searches SQEFP and QSFP are:

P, A, G, S, T (neutral, weakly hydrophobic)
 Q, N, E, D, B, Z (hydrophilic, acid amine)
 H, K, R (hydrophilic, basic)
 F, Y, W (hydrophobic, aromatic)
 L, I, V, M (hydrophobic)
 C (cross-link forming)

Variability Symbols for Sequence Code Match Searches

Variability symbols are allowed in all GETSEQ search options. For more information on specifying variability in sequence code match queries, enter HELP SQQ.

Symbol(s)	Function	Query Examples
[]	to specify alternate residues	NGSLLAGAYAIST[LV]I/SQSP
[-]	to exclude a specific residue or alternate residues	LGP[VAL-LEU-LYS]/SQSP LGP[-H]/SQSP LGP[-HIS]/SQSFP LGP[-HL]/SQSP
{m}	to repeat the preceding sequence m times	(FL){2}/SQSP (CTGA){3}/SQSN TAA(TAAA){2}/SQSN
{m,u} or {m-u}	to repeat the preceding sequence m to u times	GG(FL){1,2}/SQSP (CTGA){2,4}/SQSN
? or {0,1} or {0-1}	to repeat the preceding sequence zero or one time	FLRRI(RP)?K/SQSP FLRRI(RP){0,1}K/SQSP CATG(CGTA){0,1}GGAC/SQSN
* or {0,} or {0-}	to repeat the preceding sequence zero or more times	KLK(WD){0,}N/SQSP KLK(WD)*N/SQSP CATAA(CTG){0,}TATT/SQSN
+ or {1,} or {1-}	to repeat the preceding sequence one or more times	KLK(DLE){1,}/SQSP KLK(DLE)+/SQSP CATA(CTG){1,}TATT/SQSN
^ (Caret)	search at the beginning or end of a sequence	^MCGIL/SQS VCDS^/SQSP
	specifies alternate residues	ACDS KLMP/SQSP
&	to join together sequence expressions or queries (L#s)	

SPECIFYING GAPS IN GETSEQ SEQUENCE QUERIES

A gap may be specified in a sequence expression using the period (.) for one residue, the colon (:) for zero or one residue or the period (.) followed by an appropriate repeat expression. The following table summarizes all the options for specifying gaps in GETSEQ sequence searches.

Symbol(s)	Function	Query Examples
.	a gap of one residue	SY.RPG/SQSP SY..RPG/SQSP AAG...TGC/SQSN
.{m} or [m.]	a gap of m residues	SY.{2}RPG/SQSP SY[2.]RPG/SQSP
.{m,u} or .{m-u}	a gap of m to u residues	GFF.{2,10}LSS/SQSP GFF.{2-10}LSS/SQSP AAG.{2,5}TGC/SQSN
: or .? or . {0,1} or .{0-1}	a gap of zero or one residues	AGA:SRI/SQSFP AGA.?SRI/SQSFP AGA.{0,1}SRI/SQSFP AGA.{0-1}SRI/SQSFP
. * or .{0,} or .{0-}	a gap of zero or more residue	HLC.*TYG/SQSP HLC.{0,}TYG/SQSP HLC.{0-}TYG/SQSP AAGGCAGATG.*GCAA/SQSN
.+ or .{1,} or .{1-}	a gap of one or more residues	SY.+TH/SQSP SY.{1,}TH/SQSP SY.{1-}TH/SQSP TCCTG.+GTGG/SQSN
